

Future of Drones: Cool Uses & Impact

By **Kaya Olsen**

April 29, 2021 / Moonshot Pirates

Drones are **small flying machines (1)** that are used in many different ways. They were first **used by the military (2)**, but now people use them for other things too. They can **deliver packages (3)**, help farmers, and keep people safe. Drones can go to places where it's hard for people to go, like **caves (4)**. They can help find and **rescue people** who are in **danger (5)**. They also help **protect (6) animals** that might get hurt.

Some **companies (7)** are using drones to **deliver (8) things faster and cheaper (9)**. They can also **make events more fun by flying around with lights and cameras**. Even though drones might **take some jobs**, they also make new ones. **They can do things that are boring or dangerous**, which makes things **cheaper and easier** for everyone. And using drones that run on electricity instead of other things is better for the environment.

Drones help us **see the world in new ways** by taking **pictures and videos from high up**. As long as we **use them safely (10)**, drones can help us do a lot of things and make life better.
